# Common Interventions in Knee Surgery

- Knee Arthroscopy  
Meniscectomy / Suture
- Anterior Cruciate Ligament Reconstruction
- Patellar Stabilization Procedures
- Prosthetic Replacement Surgery of the Knee

→ next session

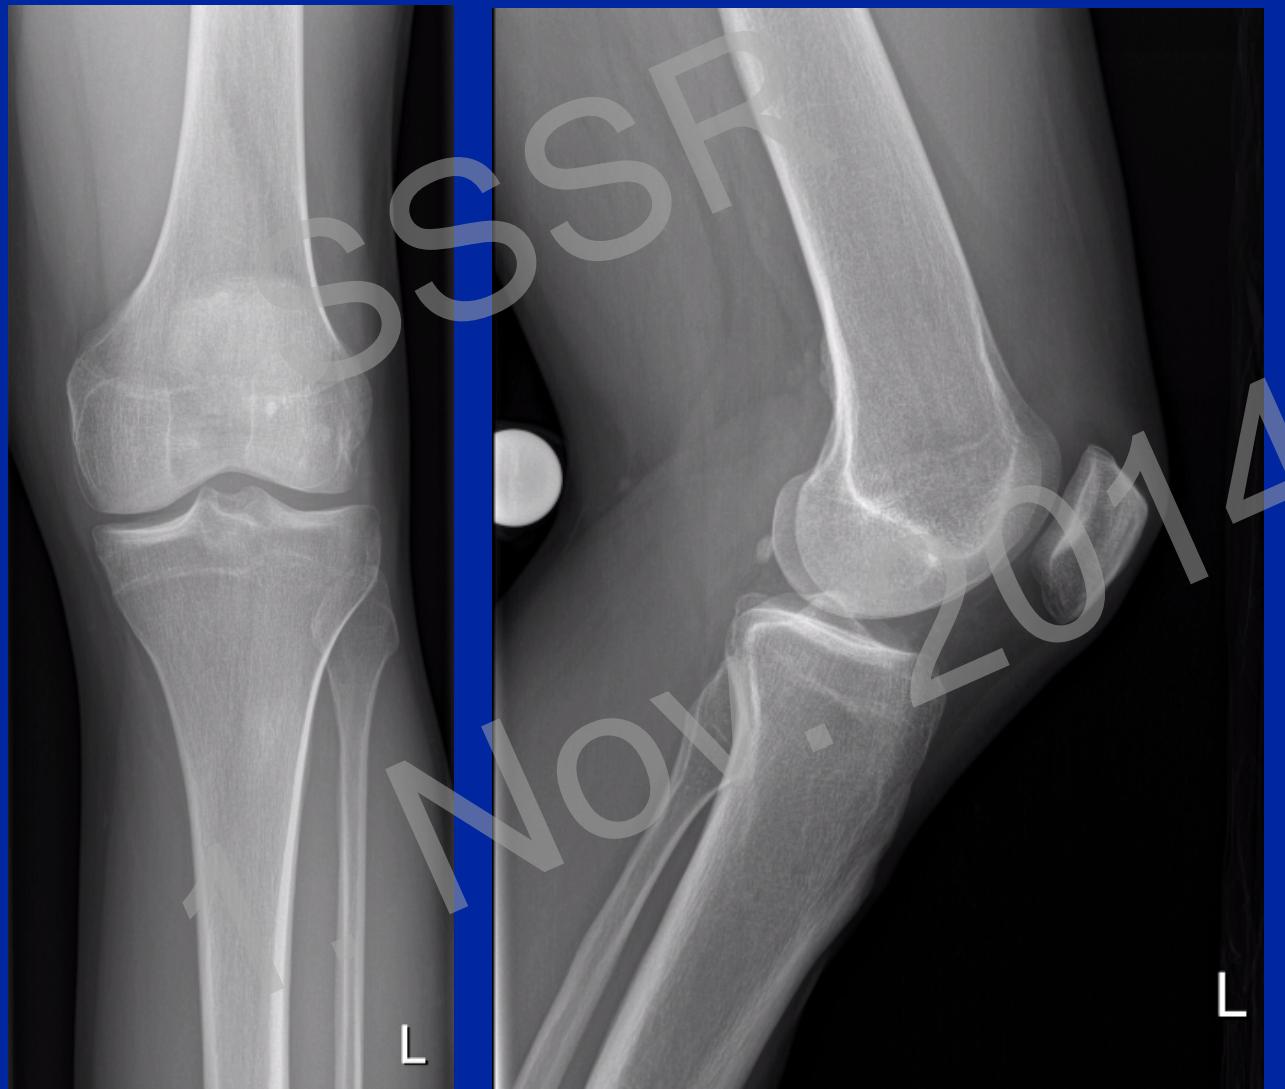

# CASE 1

---

- 34 yo, male
- Felt «popping» in left knee, stepping out of a bus
- Tenderness, positive medial meniscus signs

# CASE 3

---

- 27 yo, male
- Distortion left knee (soccer) 3 weeks before
- Positive Lachman and anterior drawer test
- Grade 2 MCL laxity
- Meniscus signs not conclusive

# TROCHLEAR DYSPLASIA

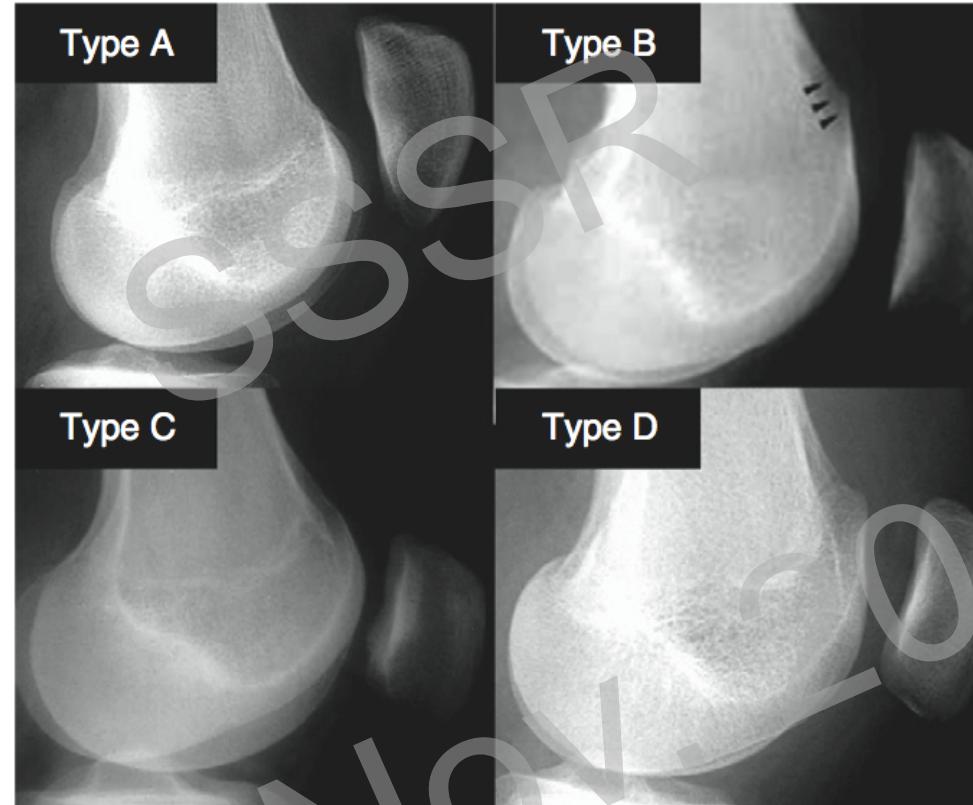

Dejour D et al (1998): Douleurs et instabilité rotulienne. Essai de classification.  
Méd Hyg; 56:1466–1471

uniklinik  
balgrist

# TROCHLEAR DYSPLASIA

**Figure 61-12.** Trochlear dysplasia assessed in lateral views. The crossing sign, the supratrochlear spur, and the double-contour sign should be assessed to classify it. *Type A:* only crossing sign is present. *Type B:* crossing sign and trochlear spur can be seen. *Type C:* crossing sign and double-contour sign representing the medial hypoplastic facet are present. *Type D:* all the mentioned signs are combined: crossing sign, supratrochlear spur, and double-contour sign.
